

InCORE

**Static In-Ground
Renewable Generation**

InCORE | Product range overview

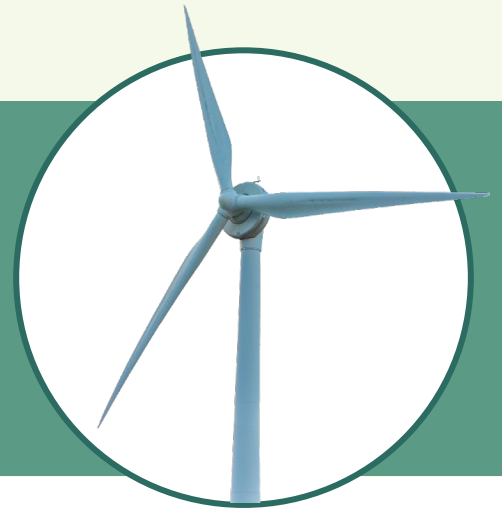

Renewable Energy. Reliable Technology.

At Infinite Renewables we specialise in making sustainable energy production accessible to all, with tailor made solutions that meet your business needs.

STATIC TURBINE RANGE

Greener power, global procurement.

We supply wind turbines for all on-shore applications. From smaller capacity Bestwatt turbines to large multi megawatt machines, we offer sustainable solutions anywhere in the world.

Want to make renewable energy more sustainable?

We offer new and refurbished turbines from major suppliers.

Existing customers can also benefit from **Repowering**: updating your outdated technology, to improve your investment.

SOLAR AND BATTERY

Sustainable power, where and when you need it.

Battery Energy Storage Systems (BESS) combine solar PV with a self-charging battery unit to provide energy wherever the sun shines.

InCORE | Turbine Range

Renewable Energy. Reliable Technology.

Infinite Renewables uses well established supply chains for new and refurbished wind turbines suitable for all onshore applications. Whatever your power needs, from smaller capacity Bestwatt turbines to large multi megawatt machines, we have the expertise to procure the right turbine for you and deliver solutions anywhere in the world.

Infinite Renewables has successfully developed projects with major turbine manufacturers from across the globe over the years, building strong relationships with industry leaders.

Infinite has the knowledge and expertise to select, supply and install InCORE wind turbines for deployment in the UK and overseas.

Using our intimate knowledge of the market and years of development experience, Infinite identifies the best turbine options for each site and provides practical and robust in-house planning and management teams to successfully build out the consented scheme.

Infinite is the sole supplier of Bestwatt turbines for Wales and the South West of England.

Need extra energy?

More powerful turbines are available up to 3MW from major suppliers including **EWT, Enercon and Vensys.**

InCORE | Solar and Battery

Renewable Energy. Reliable Solutions.

Infinite has designed, developed and continues to manage integrated multi-technology renewable energy systems which maximise the on-site use of the renewable generation. This provides protection against price volatility and enhances energy security and resilience for the site.

BESS acts as a critical bridge, storing excess energy from either source to release during low generation periods, enhancing reliability and efficiency.

Combined supply. Integrated storage.

Integrating Solar PV, wind turbines, and Battery Energy Storage Systems (BESS) creates a hybrid system that maximizes electricity output by balancing renewable intermittency and shifting energy production to peak demand times.

Ground Mounted Solar systems produce power during the day, while wind often generates more at night or in colder seasons, providing complementary generation.

Are you ready to **power your next chapter?**

Step 1: Connect & Assess

Return your completed Enquiry Form so our experts can analyze your site's potential.

Step 2: Technical Review

We'll identify your best repowering options and navigate any planning requirements on your behalf.

Step 3: Tailored Consultation

We'll meet to match the right turbine to your needs and explore our flexible funding solutions.

Step 4: Your Roadmap

Receive a formal, comprehensive proposal designed to maximize your long-term returns.
